

Aziz Azamhodjaev

Python Backend Developer • FastAPI • Docker • PostgreSQL

Building scalable backend systems, REST APIs, automation platforms, and Telegram services using Python, FastAPI, PostgreSQL, Redis, Docker, and Linux infrastructure.

[Download Resume](#)[GitHub Profile](#)

About Me

Backend developer focused on API development, asynchronous systems, automation, infrastructure, and scalable architectures.

Experienced with Python ecosystem, Dockerized applications, Linux environments, database optimization, and production-ready services.

Tech Stack

Python

FastAPI

Django

Flask

PostgreSQL

Redis

Docker

Linux

Git

REST API

AsyncIO

SQLAlchemy

JWT

Nginx

Projects

API Service Platform

Scalable REST API built with FastAPI, PostgreSQL, Redis, and Docker.

Features: JWT authentication, async endpoints, Redis caching, Docker deployment, and API documentation.

Telegram Automation Bot

Async Telegram bot with admin panel, FSM architecture, payment integration, and automation workflows.

Automation System

Python automation service for task scheduling, API integrations, data processing, and background workers.
